INSULATING SLEEVE (Click-on type)

Part No. 54959401

Completely insulates the full range of 1/4" straight Lucar terminals, crimped, welded or soldered types covering conductor sizes 14/.010" (14/0.25 mm) to 44/.012" (44/0.30 mm). A locking device ensures proper contact with the mating blade and prevents displacement of the cover.

Cable Connectors

Description	Part No.
2-way snap-in cable connector (may be used with 3/32" single cable clip Pt. No. 187042)	900288
4-way cable connector (common contact)	850641
6-way cable connector (insulated)	850844
6-way cable connector (common contact)	54948105
10-way cable connector (insulated)	850832

Cable Eyelet

NO BATTERY

**MOTOR CYCLE
CAPACITOR
MODEL 2MC**

One of the many motorcycling problems which Lucas has successfully tackled is that of the enthusiast who wants to use his road machine for occasional competition work. Obviously, he doesn't want to run with a battery in circuit, but he still needs an adequate supply of power for lighting and starting. And, after the meeting, he wants to be able to re-fit his battery for normal road use.

Lucas answer all these needs—and more—with their 2MC Capacitor Ignition System, incorporating the standard 12 volt battery coil ignition components with zener diode charge control.

This shows many advantages over the A.C. and coil ignition systems. It has been fully proved in trials work and has led the way to many important successes.

How it works The capacitor stores energy to supply the ignition coil, as required, to ensure easy starting and smoother running at all speeds. Magnetic timing is less critical than with A.C. ignition systems. Auto advance mechanisms

with a greater rate of advance, such as are used on battery-operated coil ignition systems, can be employed.

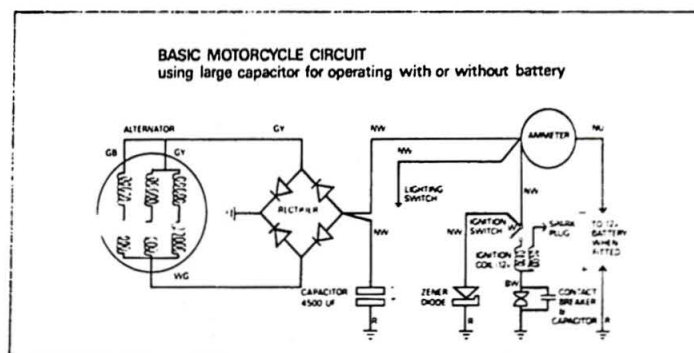

How it is fitted If your machine is already fitted with Lucas 12 volt equipment, you only need the 2 MC capacitor complete with mounting spring. The alternator should be re-connected to give full output in all lighting switch positions and the zener diode should be mounted on a heat sink of sufficient size to cope with this output. Minimum recommended heat sink size is 6" x 6" x 1/4" aluminium plate. (The shape is not important but there must be at least 72 square inches of surface area). The heat sink must be mounted in an adequate airstream.

Earlier machines, wired to give only part generator output in "Off" and "Pilot" positions, will not have heat sinks of sufficient size and replacement will be necessary.

Your machine is a 6 volt? You can enjoy the benefits of Lucas Capacitor Ignition, together with many other advantages, by converting your machine to 12 volts.

A.C. ignition equipped machines will, in addition, require a battery-charging alternator stator, a new wiring harness and lighting and ignition switches.

SOMETHING NEW in motorcycle ignition coils

The new Lucas 17P12 and 17P6 coils have been introduced as replacements for the 17M12 and 17M6 versions and incorporate the techniques used and learned in car and motor cycle coil production since the early 1950's.

Providing that the system in which they are used is capable of supplying the increased power requirements, the 17P12 and 17P6 coils will make for ease of starting, improved performance, and extended plug life.

Two new features incorporated into the design have meant that the coil size has not been increased. Firstly, the insulating top of the coil is treated with a track resistant paint to improve its insulatory properties. Secondly, the case of the coil is anodised in distinctive dark colours, not only to improve its appearance, but to increase the thermal dissipation allowing the same size of coil to handle more power.

Powerful looks with powerful performance—the new Lucas 17P12 and 17P6 coils.

Lucas Accessories

For your Car, Van or Truck

'SQUARE 8 PLUS'

QUARTZ HALOGEN FOG & LONG RANGE LAMPS

FOG LAMP

PART NO. 2320

The Lucas Fog Lamp is the ultimate in cutting through fog, smog, smoke, snow, rain and dust. It produces a clean-cut, flat-topped, wide-spread beam that vastly improves foul weather vision. Minimum dazzle for the driver ... minimum glare for approaching vehicles.

LONG RANGE LAMP

PART NO. 6320

The Lucas Long Range Passing Lamp minimizes the danger of overdriving headlights at high speeds. On a clear night its extremely intense, "flame thrower" beam lights the way almost a mile ahead.

FLEXILIGHT

18" — Part No. 1589CE
Chrome Finish

LUCAS WIRAKIT

The Lucas Wirakit contains everything you need to wire your foglamps; switch, switchholder, wire, connectors and instructions on the back of the package.
